Application Service Provider Privacy & Security Policies

| | |
|-------------------------------|---|
| Access | Access to the EHR application and all of its functions are driven by what is referred to as Function Access within the EHR Administration Module. User's access can be by function, by screen, by role and by patient chart as determined by the site or location administrator |
| Authorization | Authorization to access information contained within the EHR is maintained through the process defined above and is granted once the user enters the application using an encrypted user ID and password |
| Authentication | Authentication of the user is maintained through the secure password and user ID as defined above and each data entry point in the patient record is labeled in the database with the user ID, date and time of entry |
| Audit | The EHR worklog maintains a real time record of all access to the EHR including, but not limited to the user, the user's location, the area of the record accessed, the action taken once access is acquired and the date and time of the action |
| Secondary Uses of Data | There are no secondary uses of the data owned by the customer without express permission of the client |
| Data Ownership | The data is owned by the client |
